

Amendments to the Claims:

Claims 1-2 (cancelled)

Claim 3 (previously presented): The system of claim 11 wherein said fragrance container houses a pad saturated with scent.

Claim 4 (cancelled)

Claim 5 (previously presented): The system of claim 11 wherein the scent delivery device is a mask which covers the nasal cavity of a user.

Claim 6 (previously presented): The system of claim 11 wherein the scent delivery device is a Tee in said nasal tubing.

Claim 7 (previously presented): The system of claim 11 wherein the scent delivery device is a wishbone in said nasal tubing.

Claim 8 (cancelled)

Claim 9 (previously presented): The system of claim 11 further comprising a biofeedback system which is connected to said system so as to provide feedback as to a user and to allow said system to

react to said feedback.

Claim 10 (cancelled)

Claim 11 (previously presented): A portable scent delivery system which is worn by a user, said system comprising:

- a case adapted to be worn by a user on the user's body such that said user is ambulatory when wearing said case thereby making the system portable;

- a fan for moving scent-laden air through the system, said fan housed in said case;

- one or more fragrance containers housed in said case, each of said fragrance containers having an inlet valve and an outlet valve, said inlet valve connected by means of inlet tubing to said fan;

- a mixing bed housed in said case, said mixing bed having an inlet connected to said outlet valve of each of said fragrance containers by means of an outlet tubing and having an outlet connected to nasal tubing, said mixing bed forming a mixture of scent from scent from said fragrance containers;

- a scent delivery device for wearing by said user of said scent delivery system at the user's nose so as to deliver said mixture of scent directly to the user's nose and to remove said mixture of scent from the user's nose, said delivery device having an inlet

connected to said nasal tubing and an outlet connected to exhaust tubing; and

an electrical source housed in said case, said electrical source providing electricity to said fan so that said fan can move scent-laden air through said system.

Claim 12 (cancelled)

Claim 13 (original): The system of claim 11 further comprising a scent scrubber connected to the exhaust tubing of the scent delivery device to remove the scent from the air and prevent the scent from escaping from the system, said scent scrubber housed in said case.

Claim 14 (original): The system of claim 11 further comprising a microprocessor housed in the case for controlling the fan and the inlet and outlet valves of the fragrance containers.

Claim 15 (currently amended): A portable scent delivery system comprising:

a) a case adapted to be worn by a user on the user's body such that said user is ambulatory when wearing said case thereby making the system portable;

b) a nasal interface adapted to be worn by the user of the

system, said nasal interface selected from the group consisting of a nose mask, ~~a face mask~~, a T-joint and a wishbone;

c) a scent generator for generating scent-laden air, said generator housed in said case; and

d) a single conduit connecting said scent generator to said nasal interface.

Claim 16 (previously presented): The system of claim 15 wherein said scent generator comprises:

one or more fragrance containers for releasing scent in a stream of air;

a means for creating said stream of air and moving scent-laden air to said nasal interface; and

a mixing bed for creating a mixture of scent-laden air.

Claim 17 (previously presented): The system of claim 16 wherein said means for creating said stream of air is a fan and an electrical source.

Claim 18 (previously presented): The system of claim 15 further comprising and an exhaust conduit having two open ends, one of said open ends connected to said nasal interface and the other of said open ends connected to a scent scrubber to remove the scent from the air from said nasal interface and prevent the scent from

escaping from the system, said scent scrubber housed in said case.

Claim 19 (previously presented): The system of claim 15 further comprising a microprocessor housed in the case for controlling said scent generator.

Claim 20 (previously presented): The system of claim 15 further comprising a biofeedback system which provides feedback as to a user and to allow said system to react to said feedback.
